# *Avian Systematics*

Avian Systematics is a peer-reviewed journal that welcomes submissions for publication that address avian systematics of both modern and fossil birds. It welcomes original research, short notes, and reviews that address any aspect of systematics, taxonomy, and nomenclature of birds with the aim of an improved understanding of their diversity, relationships and classification. A submission based on original research must be accompanied by an affirmation to the effect that it is not under consideration for publishing elsewhere.

Articles that include descriptions of taxa that are being newly proposed are welcome. Nomenclature and taxon ranking follow the guidelines of the International Code of Zoological Nomenclature (1999), but for ranks not provided for by the Code, follow the table in Appendix I of the 1st (2013) volume of the Howard & Moore Checklist of Birds of the World by R. Schodde.

Volumes will have a minimum length of 160 pages. Articles with any nomenclatural acts will carry a unique ZooBank registration number and any new names will be registered with ZooBank as a condition for publishing in Avian Systematics.

Authors wishing to publish in this journal are welcome to e-mail the Editor to seek advice on the appropriateness of an intended submission.

## INSTRUCTIONS FOR AUTHORS

Authors wishing to publish in this journal are welcome to e-mail the Editor to seek advice on the appropriateness of an intended submission.

**Submission:** the initial submission should consist of an electronic document for review, ideally prepared in Microsoft Word. After the Editor's initial acceptance of the paper, all plates, tables and figures should be provided as individual items numbered in relation to the order in which they are to be inserted. They should not be embedded. A list of the captions for the numbered tables and/or figures must be supplied. All publications begin with the Copyright Statement, Abstract and Keywords. SI preferred units of measurement should be used.

**Optional Subjects and Titles:** e.g., Funding sources, Author contributions, Data availability, and Conflicts of Interest if any; these should be inserted prior to Acknowledgements. Data accessibility: Where appropriate, the supporting data base, analysis files and supplementary results should be stored in online repositories and links to them placed in the manuscript, e.g., morphobank, morphosource, genbank, and github.

**References:** for each reference all authors should be listed, except when there are more than a dozen authors, then restrict listing to just 6 authors and add "*et al.*". Neither the title and nor the publication name should be abbreviated. Pagination should be given in expanded form (e.g., not x, 500 but i-x, 1-500). Italics should be used for book titles, but not volume numbers. When citing periodicals, use italics for the journal name, not for the article title. DOIs should be provided where available. DOI: 10.1080/14772019.2015.1087064.

**Scientific names:** Taxonomic nomenclature should follow a cited named Checklist or equivalent authority. Dates associated with taxon names must reflect nomenclatural availability of the name (not the 'online early' nor any other advance publication of the associated article. See ICZN (2012) *Bulletin of Zoological Nomenclature* 69(3): 161-169.

**Date format:** where month-dates or day-dates are used, the format should be day, month, year, except in quotations. In cases where both a correct publication date and another imprint date must be given, please consult the Editor.

**Tables:** Tables should be formatted to fit page width (150 mm) with the heading row bound by solid lines and the last row bound by a solid line. Tables should, in the first instance, be produced at the end of the document, one per page, lines single spaced. The preferred position for each of them in the text should be clearly indicated by temporary signage therein. A wider table using a landscape page if suitable may be made available on request.

**Author Addresses and the email of the communicating author:** will appear at the very end of the article, after the references. ORCID identities are encouraged and will be used if provided.
